

RASD rectification

We have uploaded a new version of the RASD called “RASD v2”. In this document we have added the chapter “Conclusion” at the end, in which we specify that the additional functionalities described in the RASD will not be analyzed in the next documents. We also stated in the chapter “Alloy Modeling” that we have omitted the password field in the user’s description as unrelated to the other analyzed parts and added missing attributes in the Class Diagram.
